UcxLog Crack Keygen is a simple to use radio logging software that radio amateurs will be more than happy to make use of. UcxLog allows you to make use of standard radios in a log-like format, but without the hassle of all that pesky BTR, DFing and CW to post it online. UcxLog is a radio logging software that allows you to record the channel you are on, as well as the callsign, and the date/time of the recording and upload these recordings to an online server or folder. UcxLog Features: Users can log as many callsigns as they want Users can choose whether they want to log the channel they are on, and the callsign or not Users can log the date/time of their recordings Users can choose if they want to be notified when a new recording is made Users can choose if they want to receive confirmation of successful uploads Users can choose if they want the radio frequencies to be hidden from view, and used only for logging Users can choose how long they want to keep a recording - default is 30 days, you can change this Users can choose if they want to delete the call information after the recording has been uploaded For the more serious users, UcxLog can record a calling plan, and then keep a detailed history of who you called, who called you, and when you called them. The detailed information is captured in a database, which is easily exported into an Excel spreadsheet. UcxLog has a very easy to use interface, and the knowledgebase is extensive. UcxLog has been tested to work well with the Samsung Galaxy S4, Galaxy S3, Google Nexus 7 and Google Nexus 10 and iPad devices, and has been successfully used with Sony Nexus SL phones, and a Samsung Galaxy Tab 10.1. Please note that UcxLog will download a list of radio stations from the RadioTuner web site, and these can be added to your UcxLog as 'Automatic Stations'. UcxLog is available to buy for 10 Euro, with no licence key required. Customer Service: UcxLog is backed by a fully qualified team of customer service agents, who will be available to help you with your technical issues, and problems that may arise with your installation, and to help you with anything else you may

What's New in the?

UcxLog is a Windows application that will log any radio activity in your headphones to files. You can easily select channels by name, frequency, Q factor, key index and/or transmitter identity. Channel groupings and UTC time offsets may be selected and there is a choice of logging: to a text file, to a wave file or to a file containing both. Features: - Select channels by name, frequency, Q factor, key index or transmitter identity - Select channel groupings and UTC time offsets - Log to a text file, to a wave file or to a file containing both text and wave. Limitations: - Requires a capable USB headset with a microphone. If your headphones do not have a microphone, you can use the Microsoft Windows built-in "Record Audio" function. Installation: 1. You need to copy UcxLog to the appropriate place for your Windows OS (C:\Program Files\UcxLog). The.msi file is also supplied for use with Windows XP but you must ensure you have administrative rights to install this program. 2. Open the UcxLog main window and choose the "Program" menu and then choose the "Start" menu item. 3. Choose the "Create shortcut" menu item, press the "Ctrl+S" keys at the same time and enter the ".lnk" value for the "Destination" field. 4. When the lnk file is saved it should be a shortcut for the program. Other: You can also change the current default logging channel to any frequency on the following controls: - The "Default logging channel" control. - The "Logging index" and "Logging level" controls. - The "Stop logging" button. Frequently asked questions: Q: How can I log to a file in a different folder than the one where UcxLog is installed? A: To achieve this you should first install an alternative version of the.msi file that would have the desired destination folder as the default installation folder and then launch the software and choose the "Add destination folder" menu item and change the "Destination folder" option to the folder where you want to install the log files. Usage tips: - The "Default logging channel" control. - The "Logging index" and "Logging level" controls. - The "Stop logging" button. Bug fixes: - The "Stop logging" button. 3.0 (beta) 12/02/2007 - The user interface has been redesigned. - Option to log from line in devices has been added. Notes for Windows Vista users: Windows Vista has restrictions on the number of different shortcut that can be created and that may be deleted. These restrictions don
